(Received 5 May 2005 / Accepted 23 June 2005)

Abstract

We use G-band and Ca II H image sequences from the Dutch Open Telescope (DOT) to study magnetic elements that appear as bright points in internetwork parts of the quiet solar photosphere and chromosphere. We find that many of these bright points appear recurrently with varying intensity and horizontal motion within longer-lived magnetic patches. We develop an algorithm for detection of the patches and find that all patches identified last much longer than the granulation. The patches outline cell patterns on mesogranular scales, indicating that magnetic flux tubes are advected by granular flows to mesogranular boundaries. Statistical analysis of the emergence and disappearance of the patches points to an average patch lifetime as long as 530 ± 50 min (about nine hours), which suggests that the magnetic elements constituting strong internetwork fields are not generated by a local turbulent dynamo.

Na 2 jaar ziekte, diagnose: Chronische Sarcoïdose

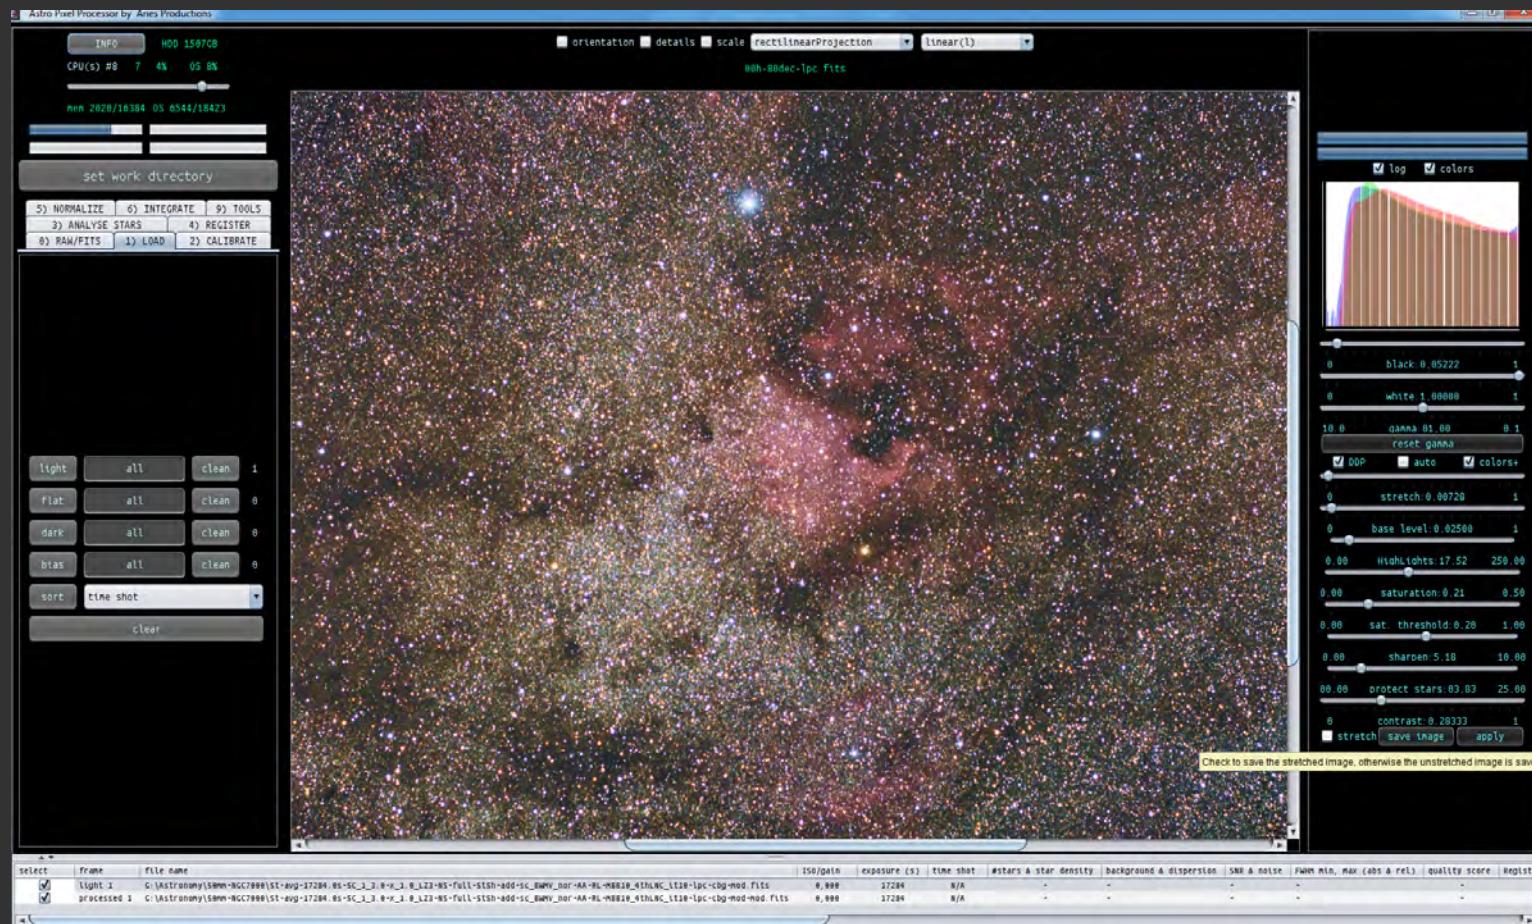

Geen arbeids mogelijkheden vanwege de beperkingen

Astro Pixel Processor?

jASS - java Align Stack Stretch?
Deep Space Integrator?

geniale ingeving van Rob Musquetier!

waarom Astro Pixel Processor?

waarom Astro Pixel Processor?

- eigen reïntegratie
 - kennis en vaardigheden op peil houden
 - niet overgeven aan de ziekte
- sterrenkunde achtergrond
 - kennis van het onderwerp
 - analytisch/wiskundig programmeren
- geadvanceerde techniek eenvoudig toe te passen

waarom Astro Pixel Processor?

- middleware/ict achtergrond
- wat gebeurd er met mijn data?
- wetenschappelijk verantwoord
- iets moois maken
- heel erg leuk!

wat is APP?

wat is APP?

compleet programma voor ver-/bewerking van Deep Sky opnames

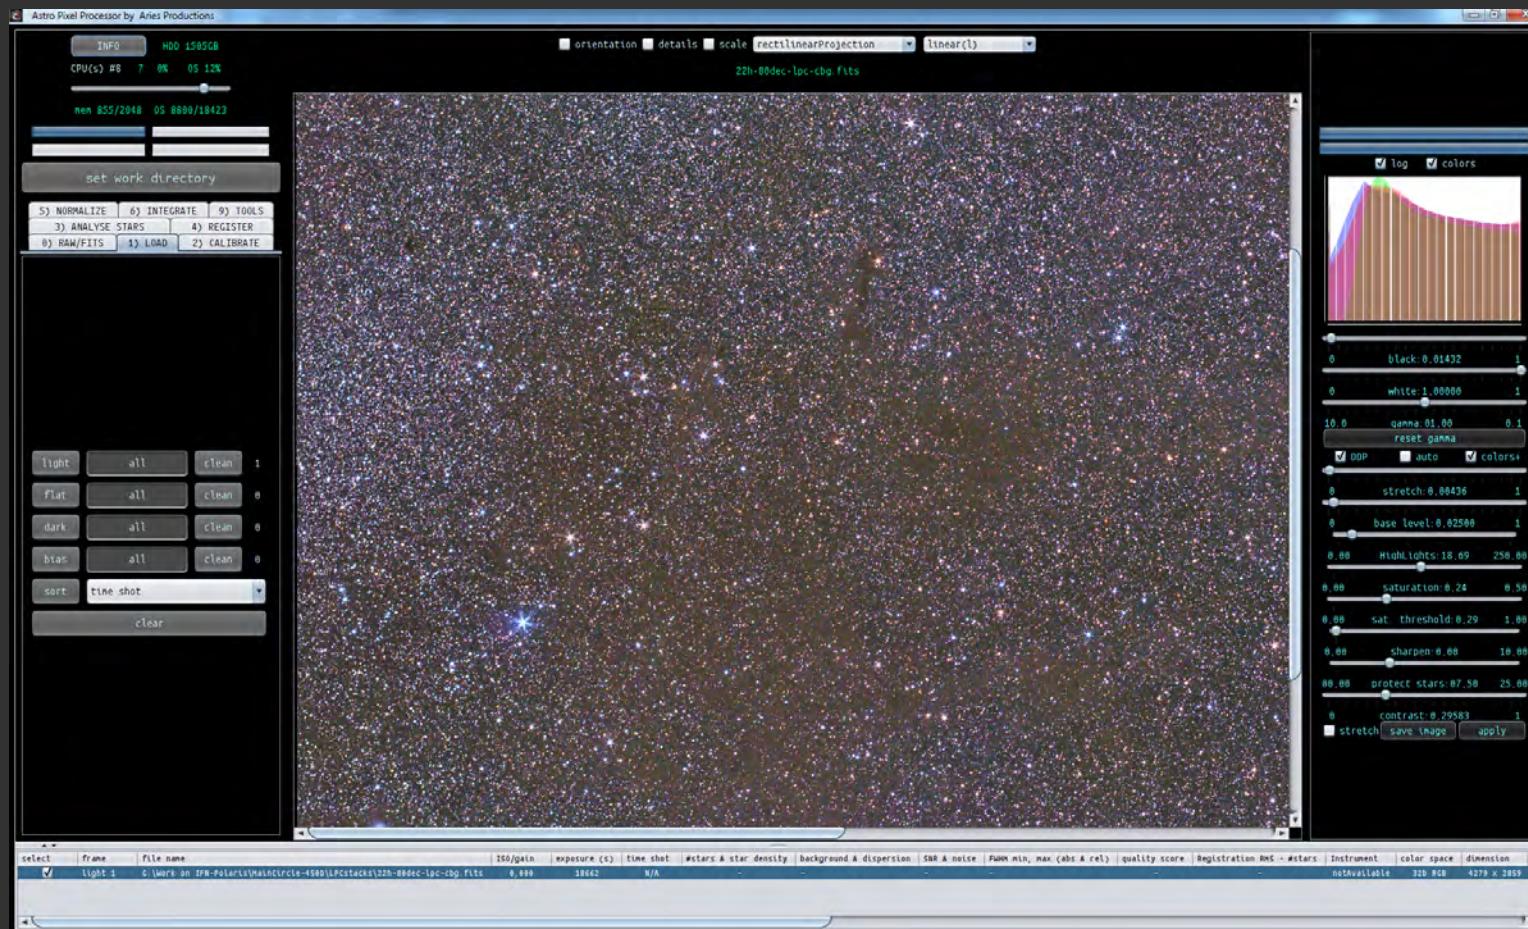

- data calibratie middels bias, darks, flats & Bad Pixel Mapping
- analyseren van sterren, vorm en grootte
- registreren/uitlijnen van opnames, regulier en mozaïeken

wat is APP?

compleet programma voor ver-/bewerking van Deep Sky opnames

- data normalisatie
- data integratie/stacken
- nabewerkings tools

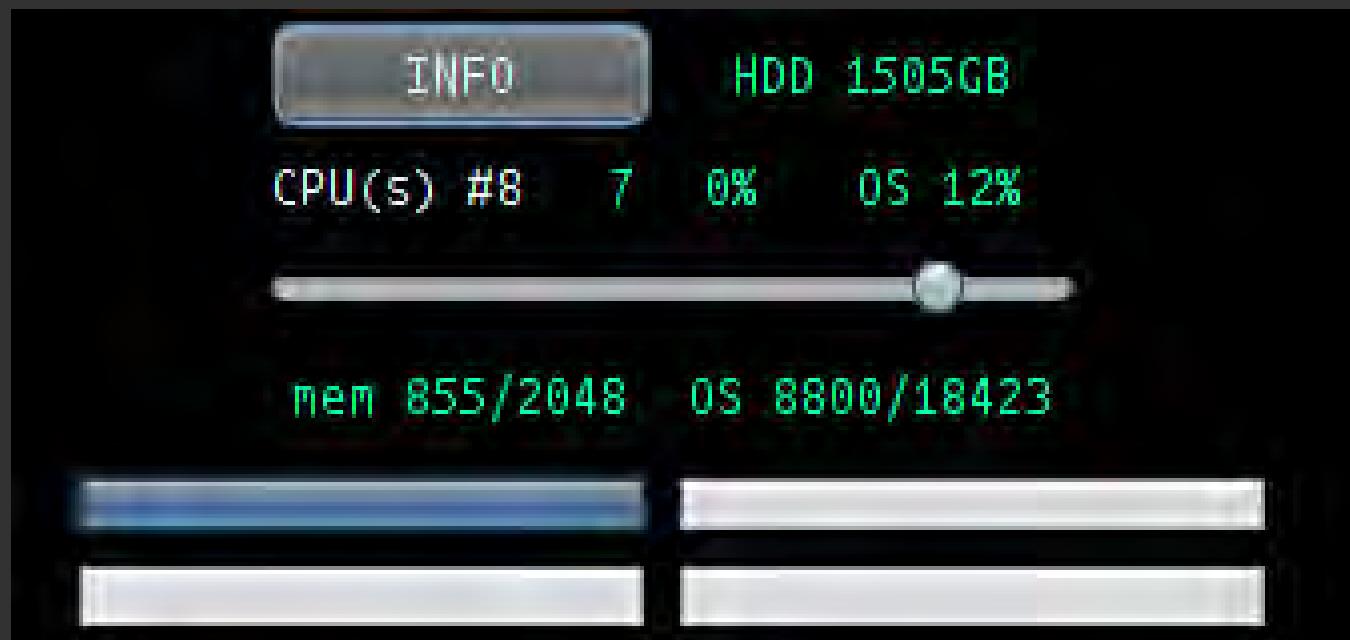

gebruikers interface

gebruikers interface

- informatie hardware bronnen
- controle paneel
- opname informatie
- opname venster
- histogram en opname filter

data integratie en nabewerking

- 4) REGISTER
- 5) NORMALIZE
- 6) INTEGRATE
- 9) TOOLS

0) RAW/FITS

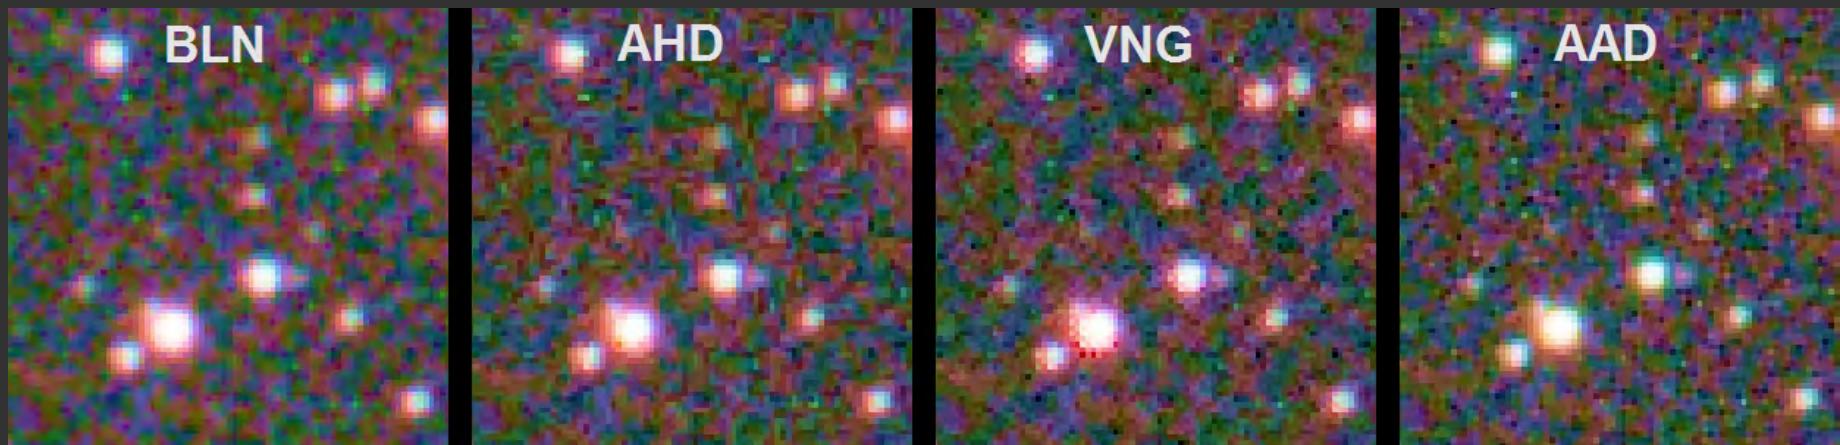

- Bayer CFA patroon (RGGB)
- Bayer CFA algoritme (AAD)
- camera witbalans
- RGB factoren
- forceer CFA interpretatie

CFA debayer algoritmes

- geen interpolatie
- bilinear
- adaptive edge
- adaptive airy disc
- super pixel

Adaptive Airy Disc - AAD

zelf ontwikkeld algoritme
voor onze sterrenfoto's

Adaptive Airy Disc - AAD

vergeleken met AHD & VNG

- beste resolutie
- minder artefacten, achtergrond/sterren
- minder chromatische ruis in achtergrond
- echt ronde sterren
- betere kleuren na achtergrond/sterkleur calibratie

CFA debayer algoritmes - smalband

- hydrogen alpha
- hydrogen beta
- Sulfur II
- Oxygen III
- Nitrogen II

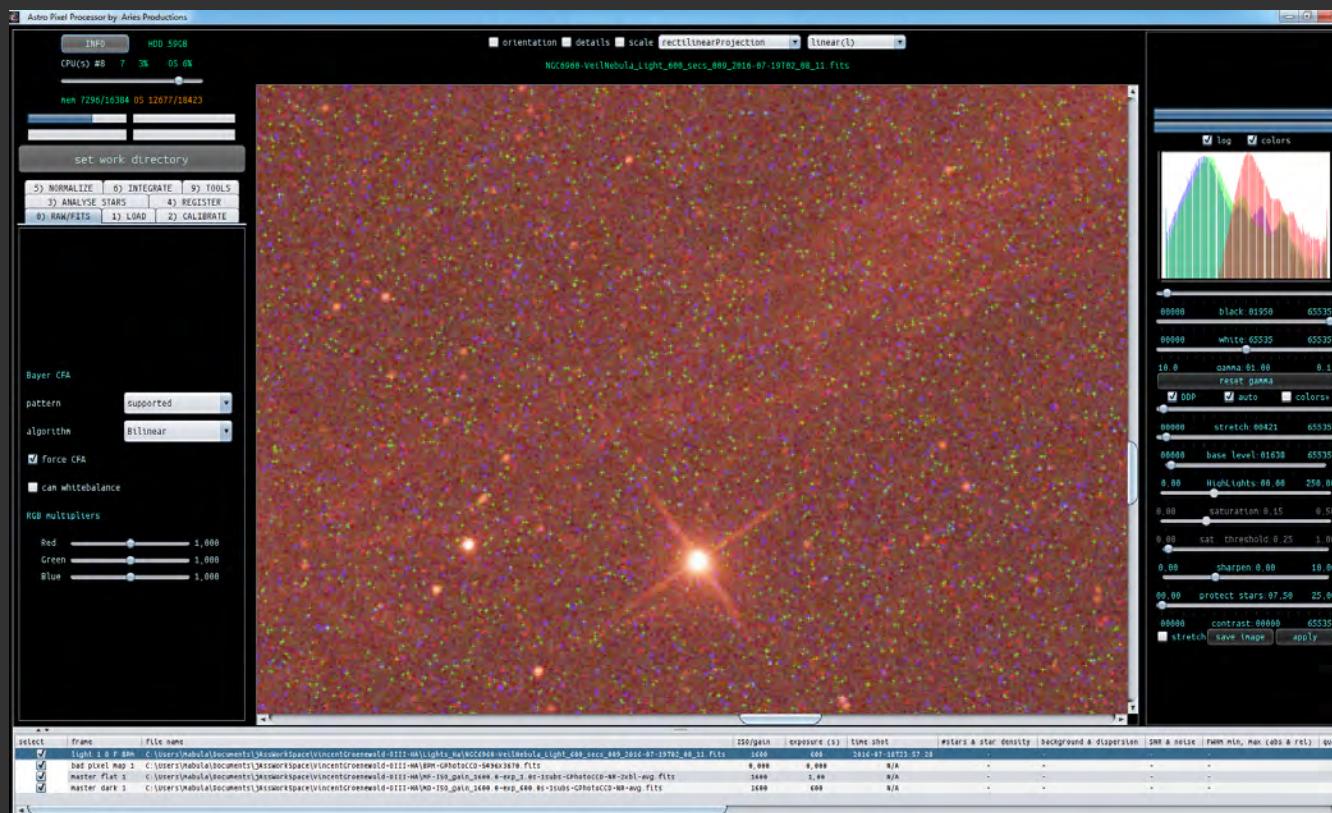

Hydrogen alpha debayer?

Veel voordelen!

- sterke versimpeling van verwerking
- behoud van resolutie (geen superpixel/split channel)
- stervormen blijven intact
- betere registratie als gevolg
- geen noise injectie van mogelijk opschalen

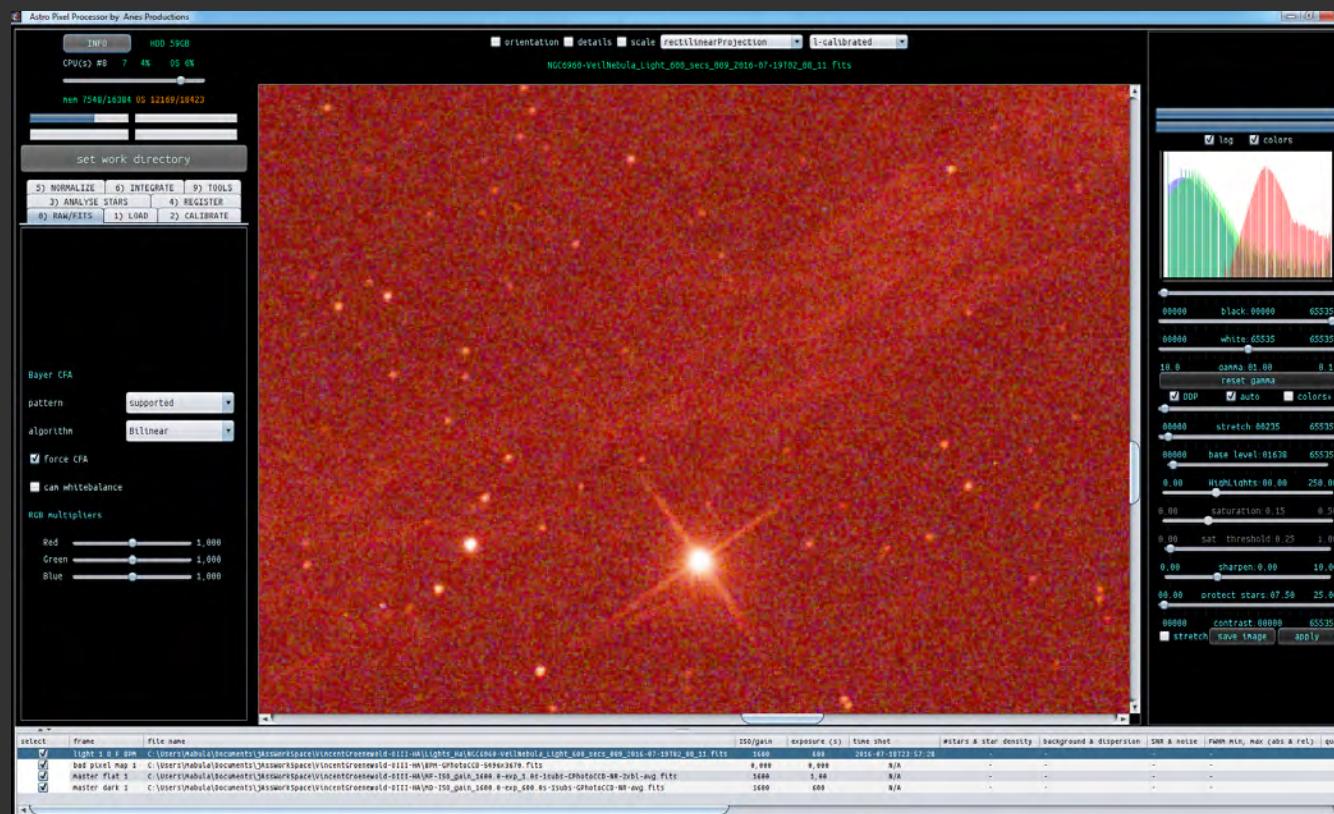

Hydrogen alpha debayer?

VOOR

5) NORMALIZE - M51, the Whirl Pool Galaxy

NA

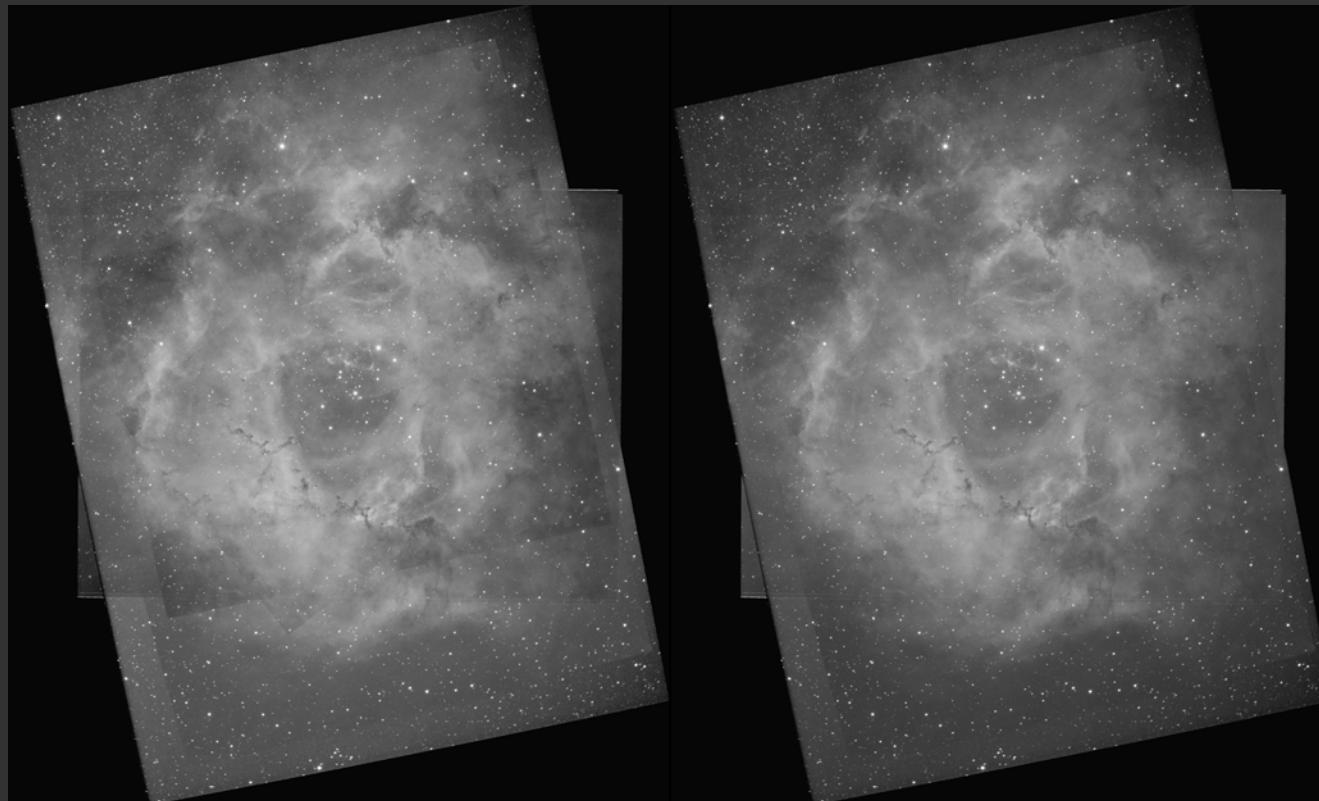

5) NORMALIZE

data normalisatie voor integratie

- opnames worden statistisch vergelijkbaar
- verbetering outlier rejection
- verbetering average/median
- ruis omlaag, SNR omhoog
- verschillende telescopen / camera's / sessies

5) NORMALIZE

advanced mode

6) INTEGRATE

data integratie / stacken

- gewichten
- compositie
- Local Normalization Correction (LNC)
- Multi-Band Blending (MBB)

6) INTEGRATE

data integratie / stacken

- outlier rejection filters
- output maps
- pixel interpolatie

6) INTEGRATE

data integratie / stacken

- schaal
- drizzle
- projectie

6) INTEGRATE - gewichten

- ster vorm/dichtheid
- ruis
- SNR (onbetrouwbaar !)
- kwaliteit
- belichtingstijd

6) INTEGRATE - compositie

- full
- reference
- crop

6) INTEGRATE - Local Normalization Correction

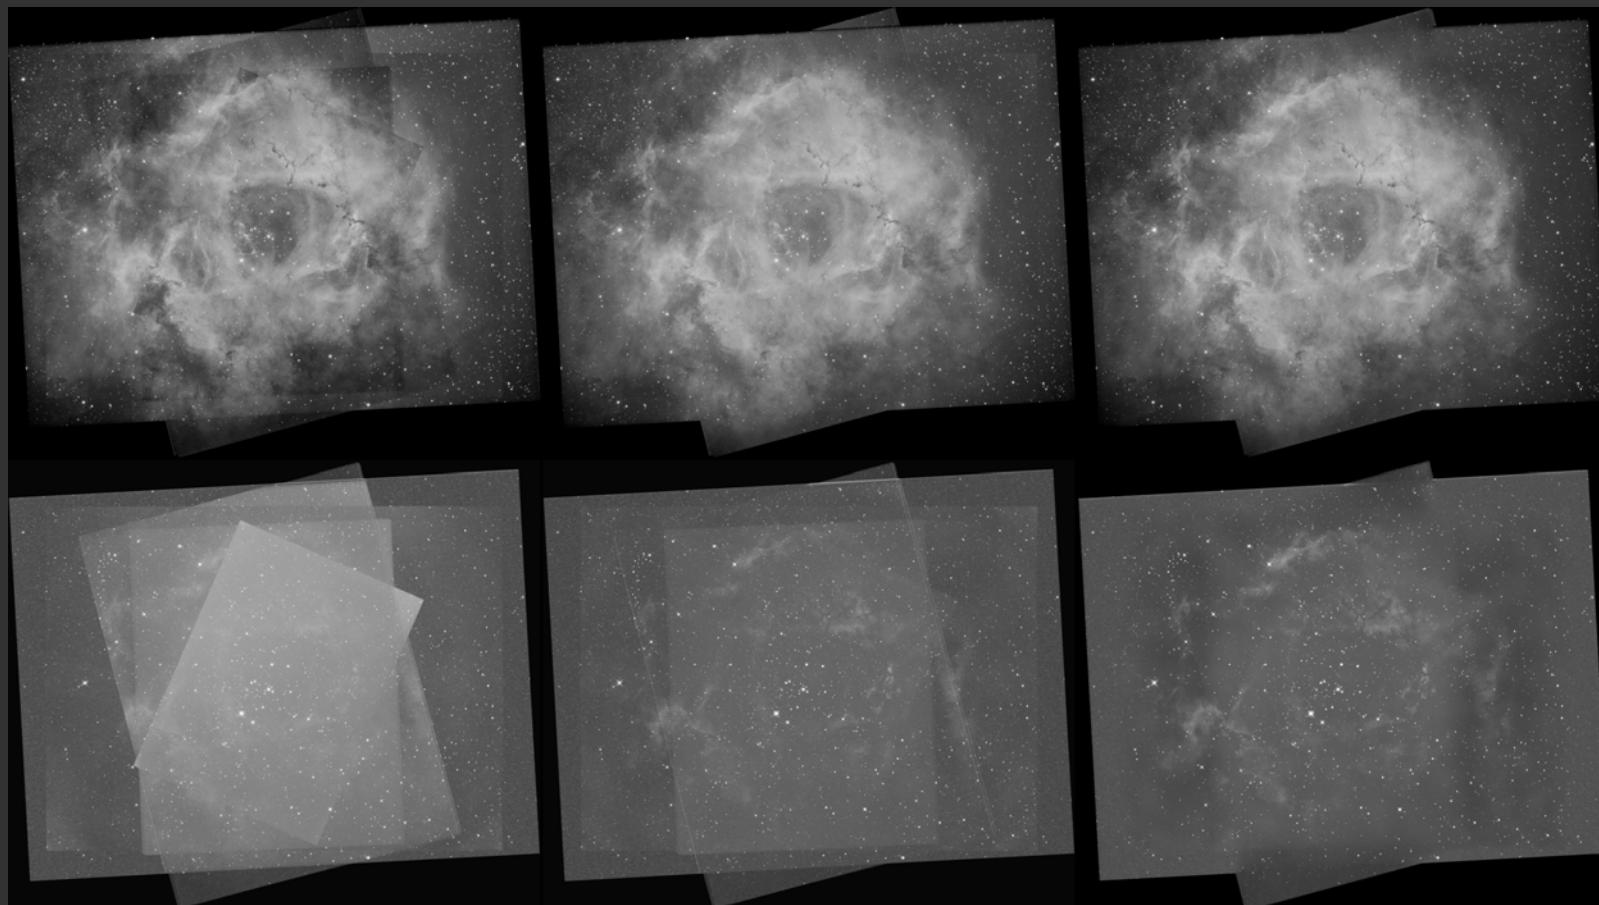

uniek & vernieuwend concept

- corrigeert alle lagen
- 1st-8th degree bivariate polynomial
- stabiele lineaire kleinste kwadraten oplossing
- correcties lokaal in alle lagen
- optimale normalisatie over hele beeldveld

6) INTEGRATE - Multi-Band Blending

- verwijderd nadelen mozaïeken
- reduceert stack artefacten
- gewicht randen opnames

6) INTEGRATE - LNC + MBB

6) INTEGRATE - LNC + MBB

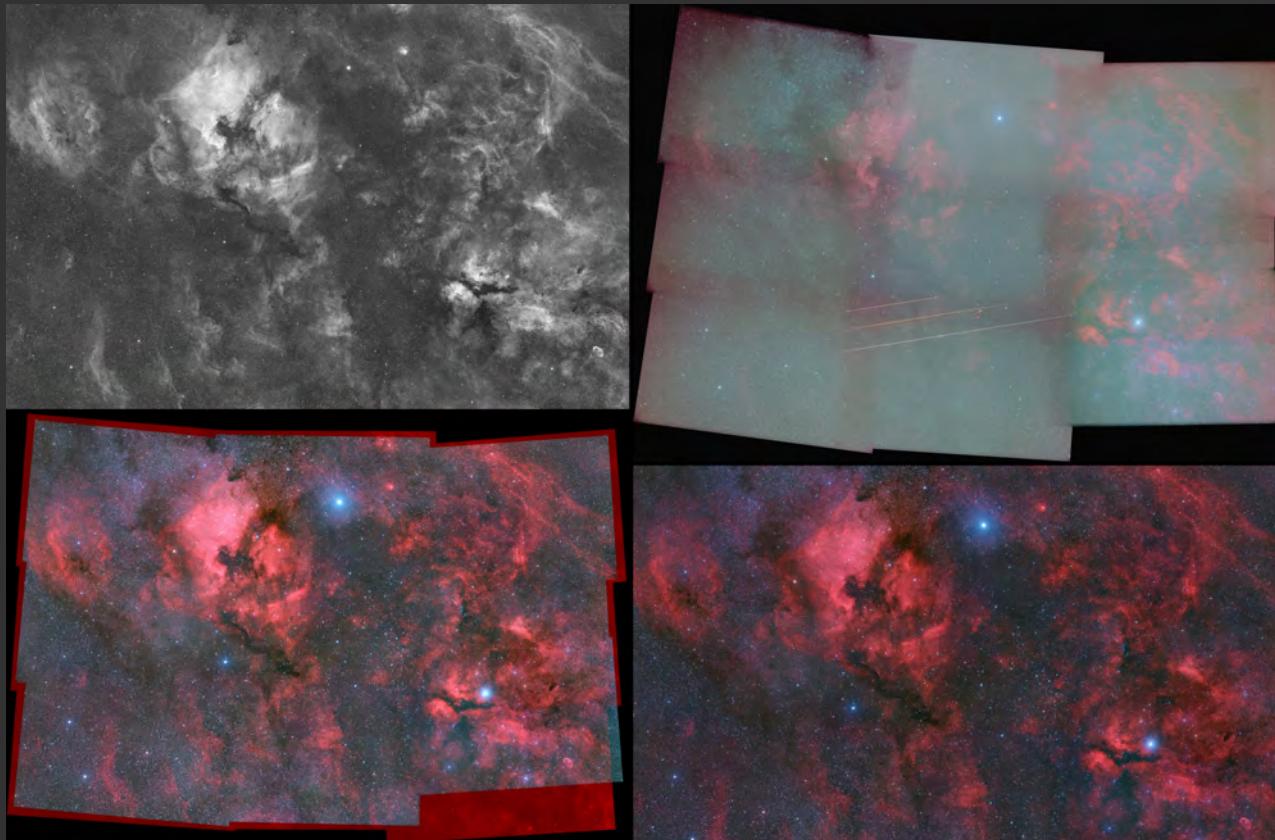

Yves van den Broek - Barnard's Loop

Nikon D810a, WO Star 71 apo

6) INTEGRATE - LNC + MBB + DDC

Yves van den Broek - North America to Crescent
Nikon D810a, D600 mono cooled, WO Star 71 apo, 9 panel

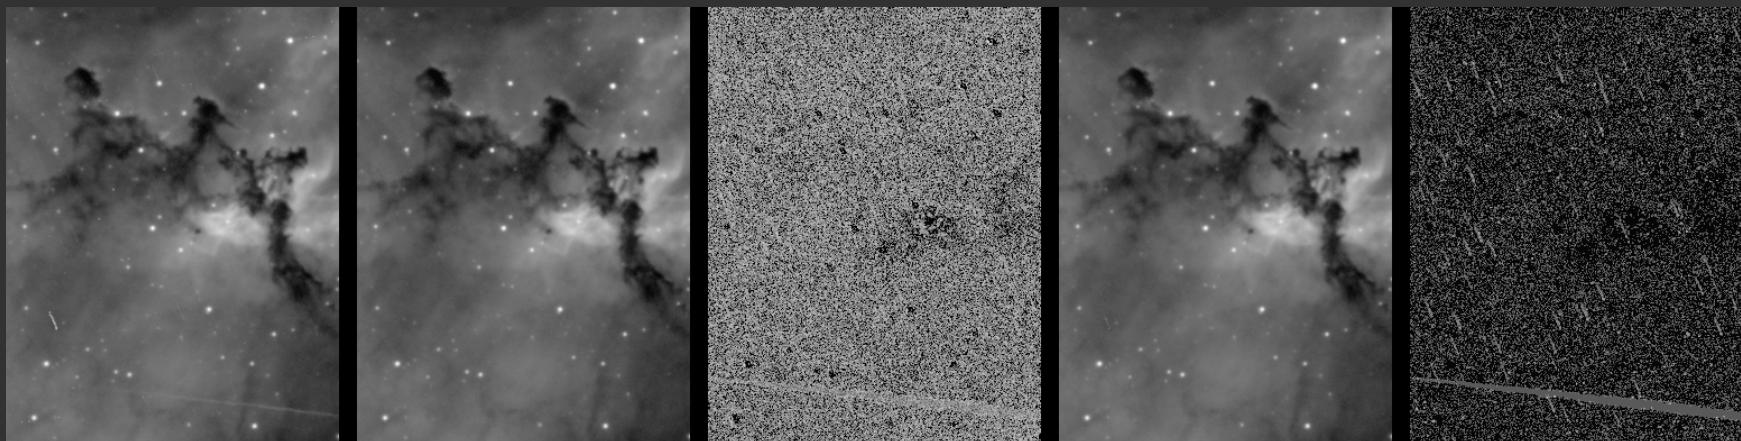

6) INTEGRATE - outlier rejection filters

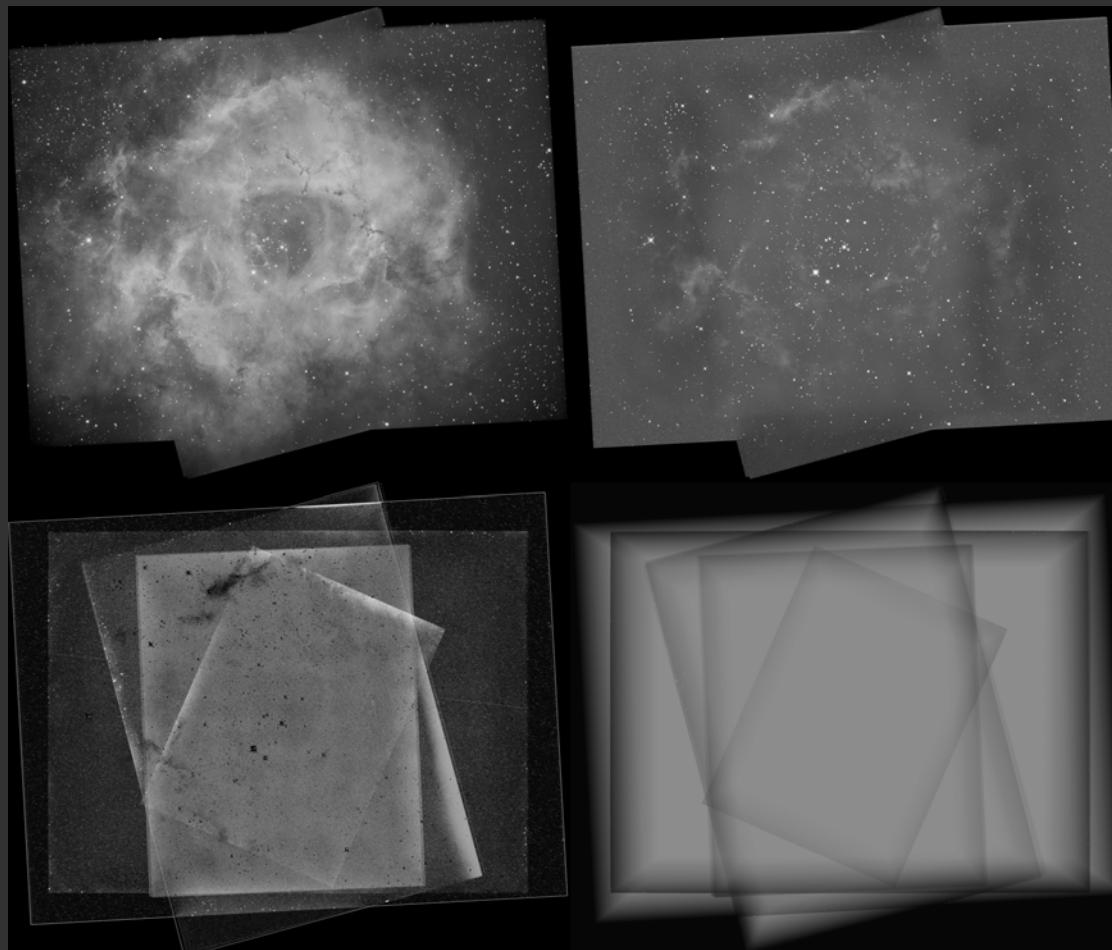

- sigma clipping
- winsorized sigma clipping (fouten)
- linear fit clipping (overbodig door LNC?)

6) INTEGRATE - outlier rejection filters

- laatste hulpmiddel (BPM, dither)
- conservatief toepassen

6) INTEGRATE - output maps

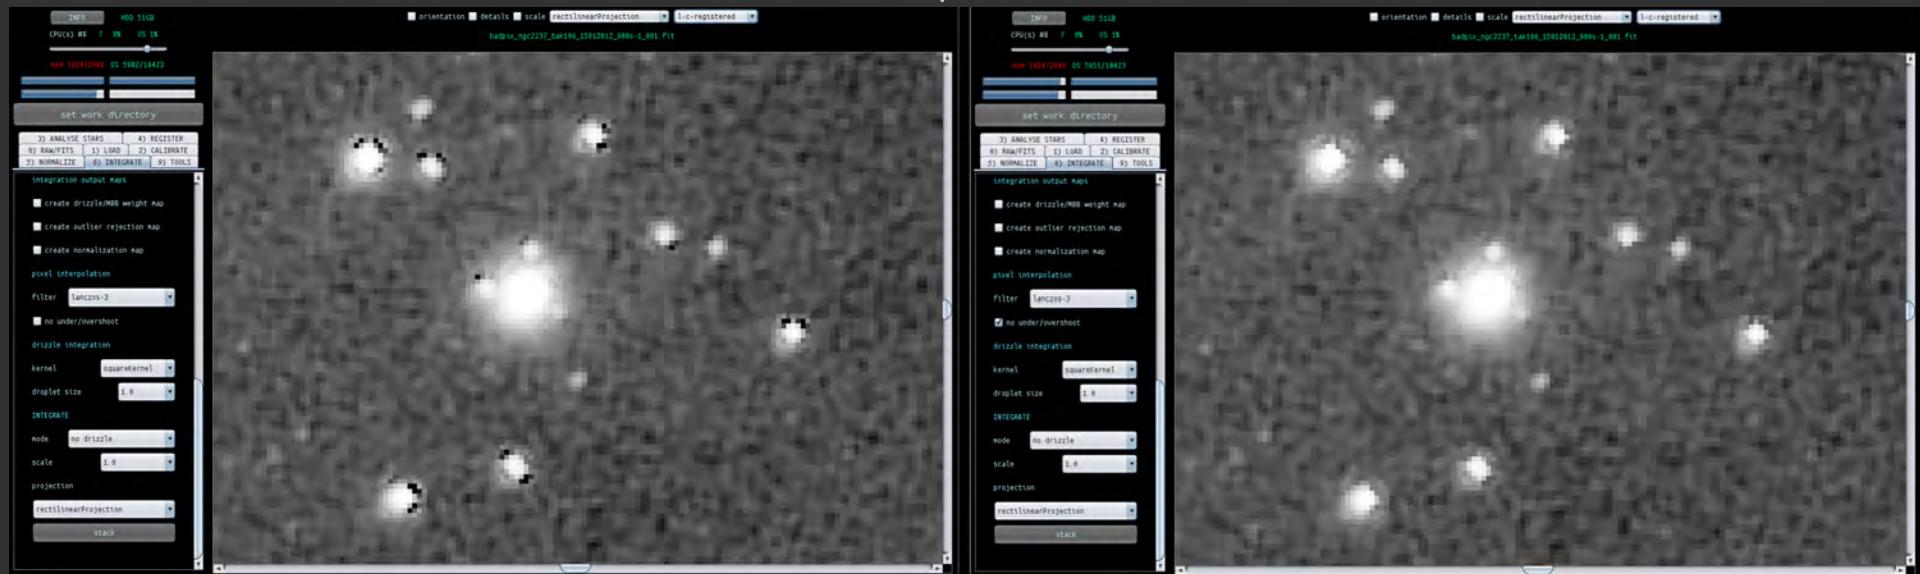

6) INTEGRATE - pixel interpolatie

- nearest neighbour
- bilinear
- Cubic B-spline, Mitchell Netravali, Catmull-Rom spline
- Lanczos 3,4,5
- no under/overshoot

6) INTEGRATE - pixel interpolatie

no under/overshoot

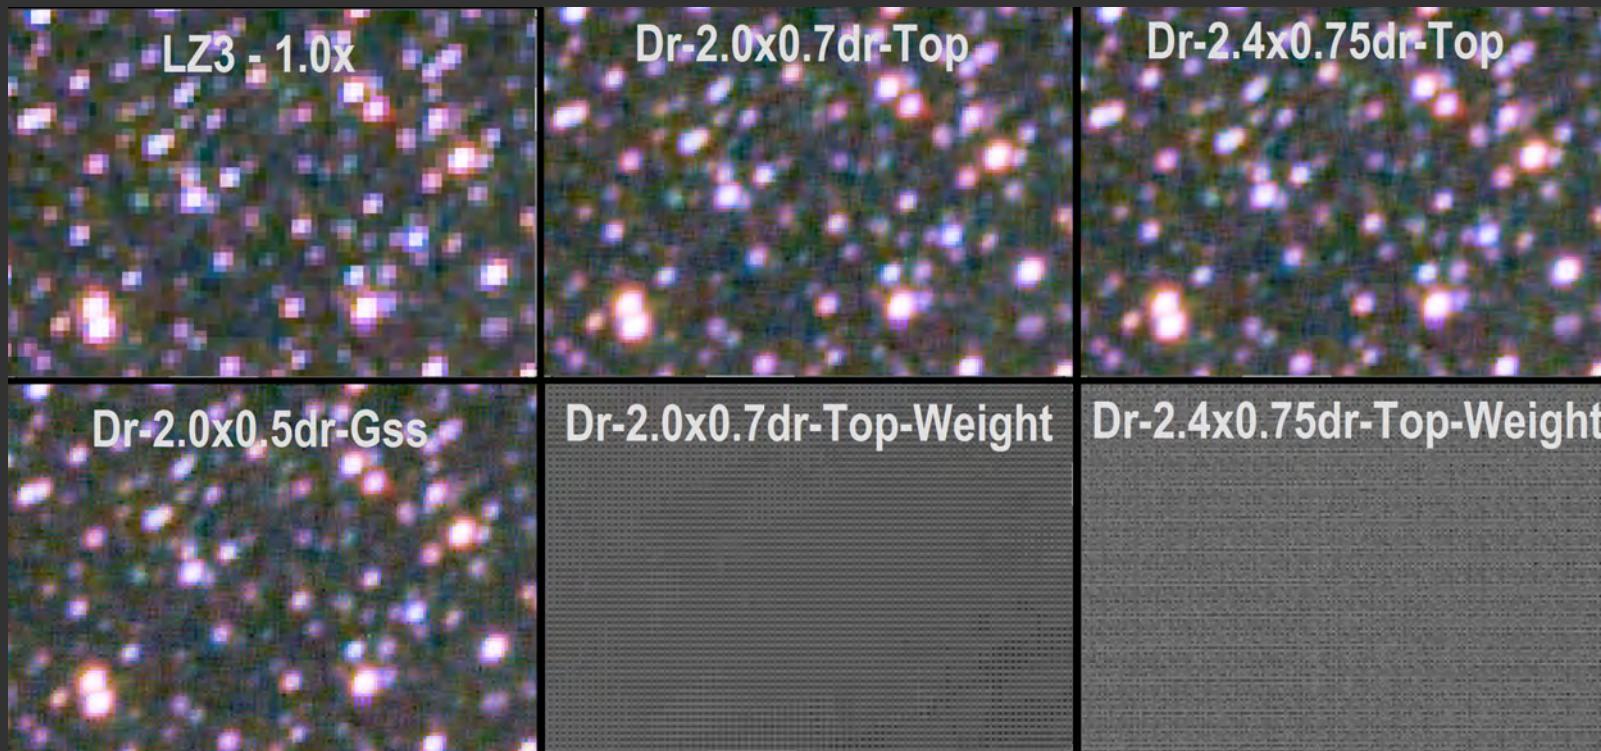

6) INTEGRATE - drizzle

voorwaardes: dithering, undersampled, ruis vs. resolutie

- schaalvergroting 1.0 - 3.0
- druppel keuze 0.1 - 3.0 (?)
- kernels: point, square, tophat, gauss
- bayer drizzle
- precisie 0.04 pixel

6) INTEGRATE - drizzle

Scott Rosen - Canon EOS 450D, 50mm f/1.8 Olympus Zuiko

9) TOOLS

lineaire data verwerking !

- batch modify
 - crop/uncrop
 - undebayer
 - metadata
 - add, multiply

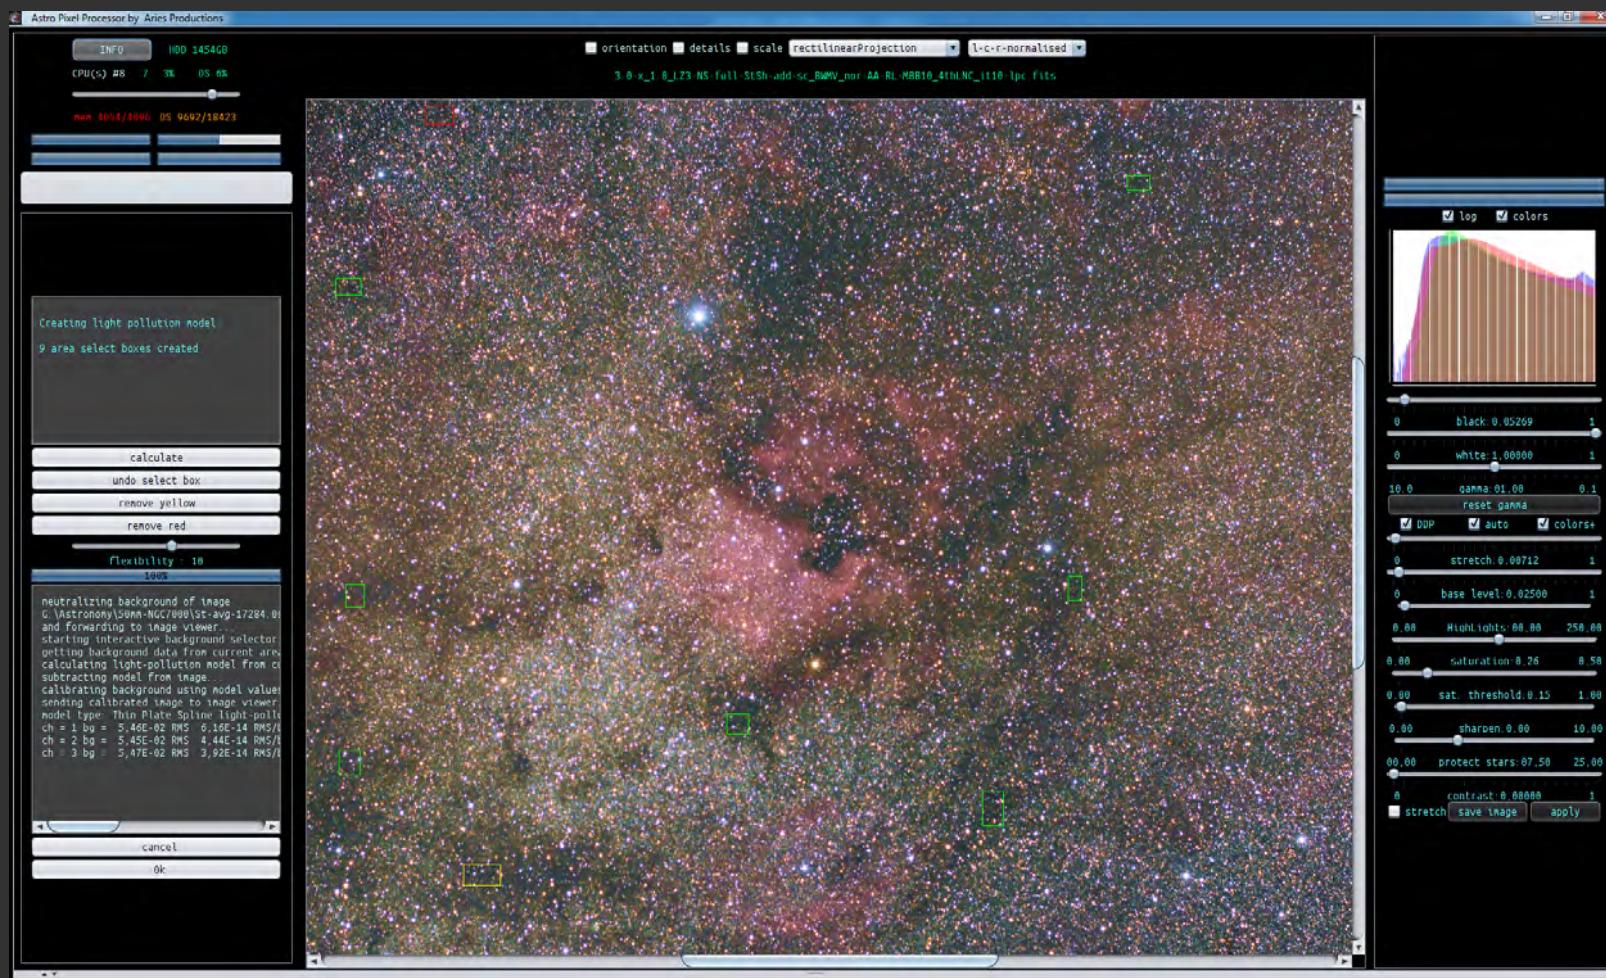

9) TOOLS

- batch rotate/resize
- correct vignetting (Kang Weiss models, artificial masterflat)
- remove light pollution
- calibrate background

9) TOOLS

- star color calibration
- combine RGB (LRGB, SII-Ha-OIII, ..)
- HSL selective color

9) TOOLS - remove LP

9) TOOLS - example

Kees Scherer - NGC2174, Monkeyhead Nebula

lights $157 \times 240 \text{ sec} = 10,5 \text{ uur}$

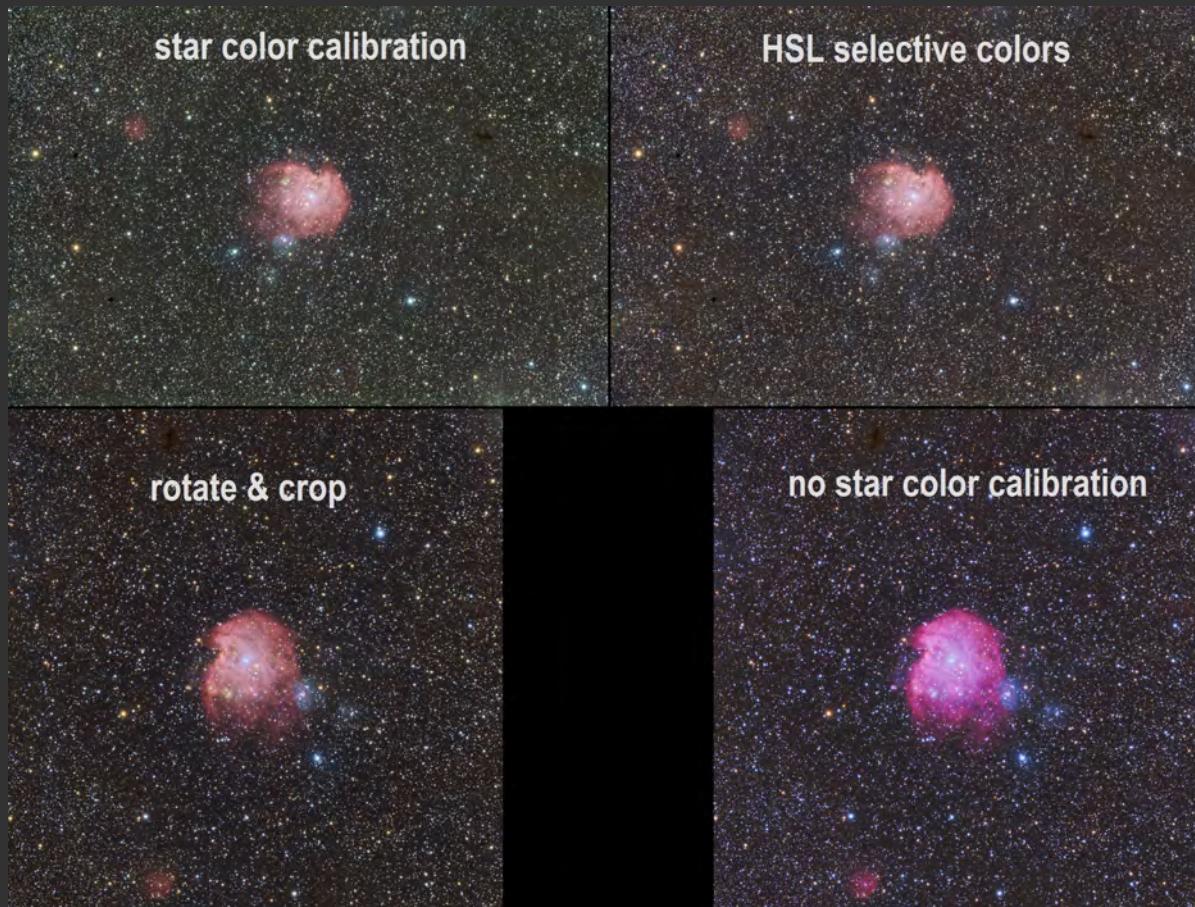

bias en flat calibratie

Esprit 100 APO f5.5, Canon 6Da,
10Micron GM2000 HPS II

9) Kees Scherer - NGC2174, Monkeyhead Nebula
